

**EXPERIENCE THE DIFFERENCE**

Slocum Equipment has been serving the powder coating industry since 1995. Our staff is knowledgeable and can be relied upon to help you find a system that is uniquely suited to your needs. We are located in the North East, but are able to service finishers nation wide through an established network of finishing professionals across the United States.

We have new and used equipment for almost any need or application, no matter what you are finishing. We can custom design a new finishing system for you, overhaul your existing system, or you can choose from our selection of quality used equipment that will save you both time and money.

Our knowledgeable staff is able to install and test machinery as well as teach your operators how to use and get maximum benefits from your new equipment.

We pride ourselves on competitive pricing and state of the art finishing equipment that is tailored to meet the individual needs of each client.

# THE WORLD LEADER IN POWDER COATING

## OptiFlex B—For easy and quick color changes

**OptiFlex B** is especially designed for the use of original powder boxes. The inclined vibration plate allows complete emptying of the powder boxes via the fluid/suction unit.

The solid and very ergonomic unit ensures trouble-free treatment of all currently available powder types, even metallic powders!

**OptiFlex B:** quick and easy color-changes carried out within a few minutes

The system comes ready to use and can be put into operation after a short assembly time.

As an option, **OptiFlex B** is available as a double gun version suitable for spraying both sides of an on-line booth.

## Optiflex -Gun

For fatigue-free coating, a manual gun has to be perfectly balanced, light and ergonomic. During the development phase of the **OptiSelect** series,

a special focus was put on these important criteria. The on-gun remote control and the quick-change connector for the grounded powder hose also contribute to comfortable color change and quick coating.

## OptiStar Controller

The patented DVC technology (Digital Valve Control) guarantees a highly precise powder output and reproducible coating results. High voltage,

spraying current, powder output and total air volume are comfortably and precisely controlled via the foil keyboard. Up to 20 coating programs can be stored in the **OptiStar** control unit, which includes also 3 preset standard programs. They are perfectly configured to coat flat parts, complicated parts, recoat parts and can be easily selected via the display pilot. A purge program supports the cleaning of the powder hose.

## OptiFlex F—For constant use of larger powder quantities

**OptiFlex F** features a 50-lb. powder container that gently fluidizes the powder via an integrated fluid plate system. For easy handling, the powder container is equipped with 3 handles and cleaning is carried out very quickly as it can be completely disassembled.

Ideal for large powder quantities

- Compatible with all powder types

- Easy cleaning of the container
